Regulatory framework

11 Recommendations

Enable the creation of a MaaS eco-system

Facilitate an efficient and equitable market

Manage mobility outcomes

Recommendations: Enable the creation of a MaaS eco-system

Adopt an explicitly pro-competitive approach to MaaS in policy and legislation

Regulate mobility operators and MaaS providers separately

Clearly establish the status of MaaS providers via a licensing scheme

Review conditions for mobility operator licences to ensure they do not include barriers to developing MaaS

Add mandatory minimum **data-sharing** requirements relating to informational and operational data to licences for mobility operators

Recommendations: Facilitate an efficient and equitable market

Build mandatory consumer **data portability**, subject to user consent, into the conditions of all Mobility operator and MaaS provider licences

Adopt **competition safeguards** as part of the MaaS provider licensing framework

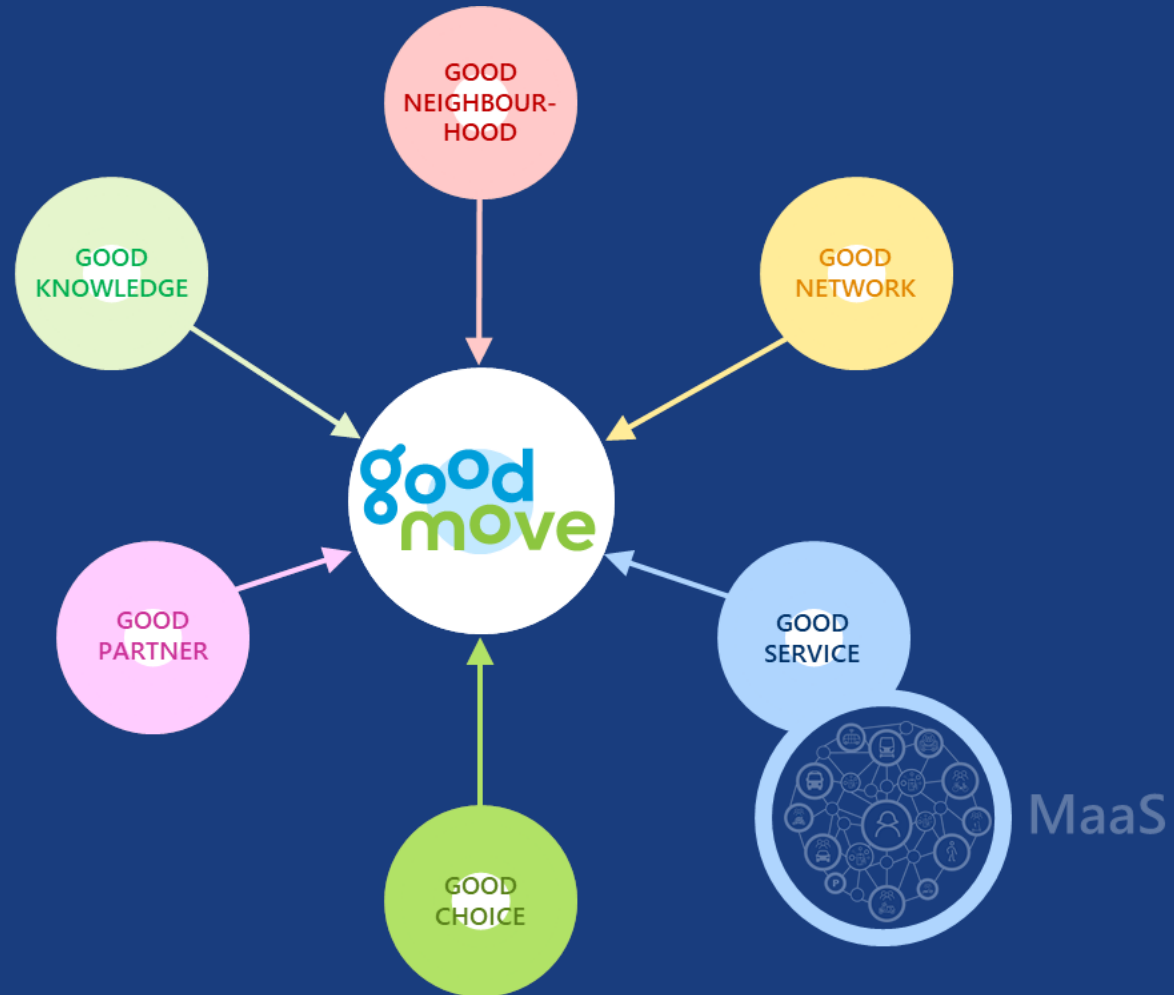

Ensure public transport operators have the **freedom to negotiate** the terms of public transport ticket resale with MaaS providers who, in turn, should be free to determine the **pricing of services** to consumers

Make data **reporting** requirements to public authorities specific and directly related to regulatory tasks.

Recommendations: Manage mobility outcomes

The Good Move policy package should remain the key vehicle for implementing sustainable urban mobility policies

Next step is to build it!

Thank you!
